

## **S.B. JAIN INSTITUTE OF TECHNOLOGY MANAGEMENT & RESEARCH, NAGPUR**

### **Practical 03**

**Aim:** Automate student marksheet generation, system information display, Fibonacci and prime number generation, and file management operations using shell scripts to enhance computational efficiency and user interaction.

**Name:** Nikhil Perkande

**USN:** CM24028

**Semester / Year:** 4<sup>th</sup>/2<sup>nd</sup>

**Academic Session:** 2025-26

**Date of Performance:** 27-01-26

**Date of Submission:** 3-02-26

❖ **Aim:** Automate student marksheet generation, system information display, Fibonacci and prime number generation, and file management operations using shell scripts to enhance computational efficiency and user interaction.

❖ **Tasks to be done in this Practical.**

- a) Write a shell script to generate mark- sheet of a student. Take 3 subjects, calculate and display total marks, percentage and Class obtained by the student.
- b) Write a menu driven shell script which will print the following menu and execute the given task.
  - Display calendar of current month.
  - Display today's date and time.
  - Display usernames those are currently logged in the system.
  - Display your terminal number
- c) Write a shell script which will generate first n Fibonacci numbers like: 1, 1, 2, 3, 5, 13
- d) Write a shell script which will accept a number b and display first n prime numbers as output.
- e) Write menu driven program for file handling activity
  - Creation of file.
  - Write content in the file.
  - Upend file content.
  - Delete file content

❖ **Objectives:**

1. Automate marksheet generation with total, percentage, and class classification.
2. Develop menu-driven scripts for system information and file operations.
3. Generate Fibonacci and prime numbers for user-defined inputs.

❖ **Requirements:**

✓ **Hardware Requirements:**

- Processor: Minimum 1 GHz
- RAM: 512 MB or higher
- Storage: 100 MB free space

✓ **Software Requirements:**

- Operating System: Linux/Unix-based
- Shell: Bash 4.0 or higher
- Text Editor: Nano, Vim, or any preferred editor

❖ **Theory:**

Shell scripting is a powerful way to automate repetitive tasks and manage system operations efficiently. It allows users to write programs using shell commands and scripting constructs. Shell scripts are interpreted line-by-line by a shell interpreter, making them ideal for administrative tasks, file management, and system automation. This practical encompasses a variety of real-world scenarios that demonstrate the utility of shell scripting for computing tasks and resource management.

**1. Marksheet Generation**

This script takes input marks for three subjects, calculates the total marks, percentage, and determines the class of the student based on predefined conditions. Conditional statements (if-else) are used to classify the performance into distinction, first class, second class, or fail. This exercise emphasizes the use of arithmetic operations and decision-making constructs.

Key concepts include:

- Reading user input using read
- Arithmetic operations with `$((expression))`
- Conditional statements for decision-making

**2. Menu-Driven Script for System Information**

Menu-driven scripts enhance user interaction by presenting a list of options for performing different tasks. In this practical, options are provided to display the calendar of the current month, the current date and time, logged-in users, and the terminal number. The script utilizes looping constructs (while) and case statements for structured flow control.

**Commands used:**

- cal for displaying the calendar
- date for showing current date and time
- who to list logged-in users
- tty to identify the terminal

**3. Fibonacci Number Generation**

Fibonacci numbers are a sequence where each term is the sum of the two preceding ones. The script uses iterative constructs (for loop) to generate n terms based on user input. This practical illustrates the use of loop control and variable swapping to generate series data efficiently.

#### 4. Prime Number Display

This script accepts an integer n and outputs the first n prime numbers. A nested loop checks divisibility to determine if a number is prime. The practical demonstrates logic building for number-theoretic operations using loops and conditionals.

#### 5. Menu-Driven File Management

The file handling script enables users to create, write, append, and delete file content. The case construct manages different file operations.

Commands include:

- touch to create files
- cat for writing and appending content
- rm for deleting files

This exercise emphasizes text manipulation, input handling, and file control mechanisms in Unix-like environments.

#### ✚ Diagrammatical View of Shell

❖ CODES

1. Write a shell script to generate mark- sheet of a student. Take 3 subjects, calculate and display total marks, percentage and Class obtained by the student.

**Output 1:**

```
student@student-BY-OEM: ~/Desktop
student@student-BY-OEM:~/Desktop$ nano pr3.sh
student@student-BY-OEM:~/Desktop$ chmod +x pr3.sh
student@student-BY-OEM:~/Desktop$ ./pr3.sh
Enter Student Name:
Nikhil Perkande
Enter marks for Subject 1:
80
Enter marks for Subject 2:
70
Enter marks for Subject 3:
89
-----
                MARK SHEET
-----
Name           : Nikhil Perkande
Total Marks    : 239
Percentage     : 79%
Class          : First Class
-----
Enter Student Name:
```

2. Write a menu driven shell script which will print the following menu and execute the given task.
  - Display calendar of current month.
  - Display today's date and time.
  - Display usernames those are currently logged in the system.
  - Display your terminal number

**Output 2:**

```
student@student-BY-OEM: ~/Desktop
student@student-BY-OEM: ~/Desktop
student@student-BY-OEM:~/Desktop$ nano topic1.sh
student@student-BY-OEM:~/Desktop$ chmod +x topic1.sh
student@student-BY-OEM:~/Desktop$ ./topic1.sh
Enter Student Name:
nikhil
Enter marks for Subject 1:
98
Enter marks for Subject 2:
90
Enter marks for Subject 3:
95
-----
                MARK SHEET
-----
Student Name : nikhil
Subject 1    : 98
Subject 2    : 90
Subject 3    : 95
Total Marks  : 283
Percentage   : 94 %
Class Obtained : First Class
student@student-BY-OEM:~/Desktop$
```

3. Write a shell script which will generate first n Fibonacci numbers like:  
1, 1, 2, 3, 5, 13

**Output 3:**

```
student@student-BY-OEM: ~
student@student-BY-OEM: ~
student@student-BY-OEM: ~
To run a command as administrator (user "root"), use "sudo <command>".
See "man sudo_root" for details.

student@student-BY-OEM:~$ nano topic.sh
student@student-BY-OEM:~$ chmod +x topic.sh
Command 'chmod' not found, did you mean:
  command 'chmod' from deb coreutils (9.4-2ubuntu2)
Try: sudo apt install <deb name>
student@student-BY-OEM:~$ chmod +x topic.sh
student@student-BY-OEM:~$ ./topic.sh
Enter the value of n:
21
Fibonacci series:
1 1 2 3 5 8 13 21 34 55 89 144 233 377 610 987 1597 2584 4181 6765 10946
student@student-BY-OEM:~$
```

4. Write a shell script which  
will accept a number b and display first n prime numbers as output.

**Output 4:**

```
Jan 27 17:13
student@student-BY-OEM: ~
student@student-BY-OEM:~$ nano code3.sh
student@student-BY-OEM:~$ chmod +x code2.sh
student@student-BY-OEM:~$ chmod +x code3.sh
student@student-BY-OEM:~$ ./code3.sh
Enter the value of n:
5
First 5 prime numbers are:
2 3 5 7 11
student@student-BY-OEM:~$
```

5. Write menu driven program for file handling activity

- Creation of file.
- Write content in the file.
- Upend file content.
- Delete file content.

**Output 5:**

```
student@student-BY-OEM: ~
To run a command as administrator (user "root"), use "sudo <command>".
See "man sudo_root" for details.

student@student-BY-OEM:~$ nano Hi.sh
student@student-BY-OEM:~$ chmod +x Hi.sh
student@student-BY-OEM:~$ ./Hi.sh
Enter file name:
Hi
-----
FILE HANDLING MENU
-----
1. Create File
2. LibreOffice 25.8 Base into file
3. Append file content
4. Delete file content
5. Exit
-----
Enter your choice:
2
Enter content to write (Ctrl+D to save):
```

```
Select priyanshu@DESKTOP-6EGFAD: ~
-----
FILE HANDLING MENU
-----
1. Create File
2. Write to File
3. Append to File
4. Delete File
5. Exit
Enter choice:
3
Enter file name:
file3
Enter content to append (Press CTRL+D to save):
ALL CLEAR
-----
FILE HANDLING MENU
-----
1. Create File
2. Write to File
3. Append to File
4. Delete File
5. Exit
Enter choice:
4
Enter file name:
file4
rm: cannot remove 'file4': No such file or directory
-----
FILE HANDLING MENU
-----
1. Create File
2. Write to File
3. Append to File
4. Delete File
5. Exit
Enter choice:
5
```

❖ **Conclusion:** In this practical, we conclude that shell scripting efficiently automates tasks like marksheet generation, system information display, number computations, and file management, enhancing system operations and user interaction through command-line utilities.

❖ **Discussion Questions:**

1. What is the purpose of using shell scripting in this practical?
2. Which command is used to display the current date and time?
3. How does the script calculate the Fibonacci sequence?
4. Which command is used to create a file in the file management script?
5. How does the prime number script determine if a number is prime?
